There are two main types of abdominoplasty:

- Complete abdominoplasty: This procedure removes excess skin and fat from the entire abdomen, from the pubic bone to the ribs. It also tightens the muscles of the abdominal wall.
- Partial abdominoplasty: This procedure removes excess skin and fat from the lower abdomen, below the navel. It does not tighten the muscles of the abdominal wall.

The type of abdominoplasty that is right for you will depend on your individual needs and goals.
