The assassination of President John F. Kennedy on November 22, 1963, was a watershed moment in American history. The assassination and its aftermath have been the subject of countless books, articles, and documentaries, and have spawned a cottage industry of conspiracy theories.

One of the most enduring mysteries surrounding the assassination is the identity of the so-called "missing witness." This person is said to have witnessed the assassination from a vantage point on the sixth floor of the Texas School Book Depository, the building from which Lee Harvey Oswald is believed to have fired the fatal shots. The missing witness is said to have seen a second gunman firing from a different location, but this claim has never been substantiated.

The search for the missing witness has been a long and winding journey, with many twists and turns along the way. In this article, we will explore the key events and figures involved in the search, and examine the evidence that has emerged over the years. We will also discuss the ongoing efforts to locate the missing witness and bring closure to this historic case.

The Early Years of the Search

The search for the missing witness began in the immediate aftermath of the assassination. In the days and weeks following the shooting, the FBI interviewed hundreds of witnesses, but no one came forward with a clear account of seeing a second gunman. In 1964, the Warren Commission, which was appointed by President Lyndon B. Johnson to investigate the assassination, concluded that there was no evidence to support the claim that a second gunman was involved.

However, in the years since the Warren Commission's report was released, a number of people have come forward claiming to be the missing witness. One of the most well-known of these claimants is Richard Carr, who claims to have witnessed the assassination from the fifth floor of the Texas School Book Depository. Carr has given several different accounts of what he saw that day, and his credibility has been questioned by some researchers.

Another claimant to the title of missing witness is James Files, who claims to have been a member of a team of assassins that killed Kennedy. Files has also given several different accounts of his involvement in the assassination, and his credibility has also been questioned.

The Search Continues

The search for the missing witness has continued in recent years, with the help of new technologies and investigative techniques. In 2013, a team of researchers from the University of Texas at Dallas used facial recognition software to analyze footage of the assassination. The researchers identified a man in the crowd who they believe may have been the missing witness.

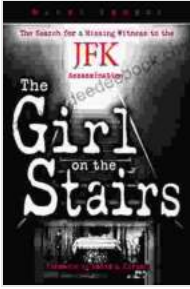

In 2017, a team of researchers from the University of California, Riverside published a study that found that there is a 95% probability that a second gunman was involved in the assassination. The study used a variety of statistical techniques to analyze the available evidence, and the researchers concluded that the most likely scenario is that Oswald was part of a conspiracy to kill Kennedy.

The search for the missing witness is still ongoing, and there is no guarantee that he or she will ever be found. However, the ongoing efforts to locate this witness are a testament to the enduring fascination with the JFK assassination, and the desire to find out the truth about what happened that fateful day in Dallas.

The search for the missing witness to the JFK assassination has been a long and winding journey, with many twists and turns along the way. While there is no guarantee that this witness will ever be found, the ongoing efforts to locate him or her are a testament to the enduring fascination with the assassination, and the desire to find out the truth about what happened that fateful day in Dallas.
